

MASTER PRD - EarnScroll

Author: Ansh

Version: 1.0

Date: October 20, 2025

1. Introduction & Executive Summary

1.1. Product Name

EarnScroll

1.2. Vision & Mission

To become the market-leading digital wellness application by empowering users to transform their relationship with technology. We will achieve this by transforming the detrimental habit of "doomscrolling" into a catalyst for physical fitness through an innovative, secure, and user-centric "Screen-Time Gym" model.

1.3. Executive Summary

EarnScroll is a mobile application designed to combat compulsive screen time by creating a transactional relationship between exercise and access to distracting applications. It is built on the psychologically effective "temptation bundling" premise of its market predecessor, Pushscroll, where users must earn screen time by performing physical exercises.

However, EarnScroll is engineered to be a superior product by systematically addressing the critical failures of the original concept. Our mission is to provide a trustworthy, flexible, and reliable tool built on a foundation of unimpeachable security, a user-friendly freemium model, and a highly accurate core technology.

2. Strategic Goals & Market Opportunity

2.1. User Goals

- To reduce time spent on mindless scrolling and "doomscrolling."
- To build a consistent and sustainable fitness habit.
- To feel more in control of their digital habits and improve overall well-being (focus, sleep, mental clarity).
- To use a tool that is flexible and adapts to their lifestyle, not one that creates frustrating obstacles.

2.2. Business Goals

- Establish EarnScroll as the most trusted app in the "exercise-for-time" category.
- Achieve a 4.8+ star rating on the Apple App Store and Google Play Store.
- Acquire 500,000 active free-tier users within the first year.
- Achieve a 5% conversion rate from free to paid users within the first year.

2.3. Market Opportunity & Competitive Edge

The predecessor, Pushscroll, validated the core psychological model but failed on execution. EarnScroll's strategic opportunity is to capture the market by directly addressing Pushscroll's weaknesses:

- **Security:** Implement mandatory end-to-end encryption, a critical failure in the predecessor.
- **Monetization:** Offer a flexible and genuinely useful freemium model to reduce the high friction of Pushscroll's hard paywall.
- **Reliability:** Invest in a best-in-class, high-accuracy pose detection engine to prevent the user frustration caused by the predecessor's unreliable tech.
- **Flexibility:** Provide user-centric customization (custom ratios, scheduling, emergency access) to address the rigidity of the original.

3. Target Audience & User Personas

Our target user is anyone who recognizes their struggle with screen time but has found traditional restriction-based blockers ineffective.

- **The Procrastinator (Student/Professional):** Ages 18-35. Needs a tool to enforce discipline for work or studies.
- **The Aspiring Fitness Enthusiast:** Ages 25-45. Wants to get fit but struggles with motivation; "earning" a guilty pleasure is a powerful incentive.
- **The Mindful Tech User:** Ages 20-50. Actively trying to cultivate a healthier relationship with technology, concerned with data privacy.
- **Individuals with ADHD:** Benefit from external systems that create structure and manage distractions.

4. Product Features & Requirements (v1.0)

EPIC 1: The Core Engine - "Earn Your Time" Loop

Feature ID	Feature Name	Description & Requirements	Priority
CE-101	Smart App Blocker	The app must function as a gatekeeper for user-selected applications. When a user attempts to open a blocked app, EarnScroll must intercept and display a "Block Screen".	Must-Have
CE-102	App Selection	Users must be able to view and select any installed application on their device to be managed by EarnScroll.	Must-Have
CE-103	Time Bank	The app must maintain a central "Time Bank" of earned minutes. The block screen must clearly display the time remaining.	Must-Have
CE-104	Custom Ratios	Users must be able to adjust the "exercise-to-time" ratio (e.g., 1 squat = 30s, 1 min, or 2 mins of time). Default: 1 rep = 1 minute.	High
CE-105	Blocker Scheduling	Users must be able to define specific days and times when EarnScroll is active (e.g., only during	High

		work hours, 9 am-5 pm on weekdays).	
CE-106	Emergency Access	Provide a limited-use override. Users get a small, non-accumulating number of "Emergency Pauses" (e.g., 3 per day) that grant immediate access for a short, non-negotiable duration (e.g., 5 minutes).	High

EPIC 2: The AI Gym - Exercise Verification

Feature ID	Feature Name	Description & Requirements	Priority
AG-201	AI Exercise Verification	Use the device's front-facing camera and on-device machine learning (e.g., MediaPipe or similar) to detect and count exercise repetitions. All processing must occur on-device to protect user privacy.	Must-Have
AG-202	Initial Exercise Library	Must support a minimum of 5 exercises at launch: Pushups, Squats, Sit-ups, Jumping Jacks, and Planks (timed).	Must-Have
AG-203	Accuracy Standard	The detection algorithm must achieve >95% accuracy in counting valid repetitions under various lighting conditions and for diverse user body types.	Must-Have
AG-204	Real-Time Feedback	Provide clear on-screen visual and haptic feedback for successful rep counts. Provide corrective guidance for poor form (e.g., "Go lower," "Keep your back straight").	High

EPIC 3: User Experience & Motivation

Feature ID	Feature Name	Description & Requirements	Priority
------------	--------------	----------------------------	----------

UX-301	Dashboard	A central hub displaying the "Time Bank," daily and all-time workout stats (total reps per exercise), and the current workout streak.	Must-Have
UX-302	Workout Streaks	Implement a streak counter for consecutive days with at least one exercise session completed. This is a key motivator.	Must-Have
UX-303	Progress Tracking	Showcase historical data and analytics to visualize progress over time, reinforcing the user's positive habit changes.	High

EPIC 4: Trust & Security (Non-Negotiable Requirements)

Feature ID	Feature Name	Description & Requirements	Priority
TS-401	Data Encryption	MANDATORY: Implement industry-standard TLS encryption for all data in transit for both iOS and Android versions. This must be explicitly stated in app store listings.	Critical
TS-402	Legal Transparency	The Privacy Policy and Terms of Service must be hosted on a stable, company-owned domain. Links in-app and on store listings must be permanently valid and easily accessible.	Critical
TS-403	Clear Data Policies	Clearly and simply disclose all data collection and sharing practices. If any data is shared with third parties, the purpose and parties involved must be named.	Critical

5. Monetization Strategy

EarnScroll will launch with a freemium model to maximize user adoption and demonstrate value before asking for payment.

5.1. Free Tier

- **Functionality:** Users can block up to **two (2)** applications of their choice. Access to the core exercise library (5 exercises).
- **Goal:** Allow users to fully experience the app's core value proposition and build the habit.

5.2. Pro Tier (Subscription & Lifetime)

- **Functionality:**
 - Unlimited app blocking.
 - Access to the full, expanding exercise library.
 - Advanced analytics and progress reports.
 - Advanced customization features (ratios, scheduling, etc.).
 - (Future) Wearable integration and guided workouts.
- **Pricing:**
 - **Monthly Subscription:** ~\$9.99 / month
 - **Annual Subscription:** ~\$49.99 / year
 - **Lifetime Access (One-Time Purchase):** ~\$149.99

6. Future Roadmap (Post-v1.0)

- **Expanded Fitness Platform:** Introduce guided workout routines and structured fitness plans that earn larger blocks of time.
- **Wearable Integration:** Allow users to earn time from activities tracked via Apple Watch, Google Fit, etc. (steps, calories burned, workout duration).
- **Social Accountability:** Build in-app features for accountability partners and friend challenges to create a network effect.
- **"Time Debt" Mode:** An optional mode allowing users to "borrow" screen time that they must "pay back" with exercise by the end of the day.
- **Cross-Platform Sync:** Sync earned time and blocked apps across a user's phone, tablet, and desktop.

7. Success Metrics (KPIs)

- **Engagement:**

- Daily Active Users (DAU)
- Average number of exercise sessions per user per week

- **Effectiveness:**

- Average reduction in screen time on blocked apps (measured via API)
- User-reported fitness improvements (via surveys)

- **Monetization:**

- Free-to-paid conversion rate
- Subscription renewal rate
- Lifetime purchase rate

- **Quality & Satisfaction:**

- App store ratings and user reviews
- Customer support ticket volume and resolution time
